Mobile Code Challenge

Here is our code challenge:
https://xd.adobe.com/view/9a3f7272-f4c1-4e65-9287-89ad0f353406-cf6c/screen/32774e24-445f-467c-99ca-4fdf570c8a09/

Please implement Debit Card Screen and Set weekly spending limit screen.

You can define your own user stories (business requirements) with those designs. Those requirements should be described in README.md.

Pls send us back your works via GitHub or GitLab.

Notes:

- Make the calls to a mock API server to return dummy data. We will not evaluate your server code so you can choose your own way to implement the server side.
- Unit Test is an optional but it is a very positive point.
- README.md file also shows your coding skills and experience.
- Typescript and Redux Saga are optional but recommended just because we are using them.
- Make sure your app can run on both iOS and Android

We hope to receive your work after 3 days on ….
